RESIDENTIAL PROJECT PROPOSAL

SONANCE

BEYOND SOUND

RE-IMAGINING SOUND

We continuously innovate beyond product, crafting new categories and telling compelling stories that add value to our solutions, allowing music to enrich life.

DESIGNED TO DISAPPEAR

Our technology effortlessly blends into architecture and interior design, transforming any space while respecting its original aesthetic.

AUTHENTIC PARTNERSHIP

We form enduring relationships built on authenticity and trust. With an “Our Team is Your Team” ethos, we collaborate closely with our customers to help unlock value and be the best partner we can be.

LEADING WITH CULTURE

We foster a culture of transparency, engagement, and genuine care, where team authenticity fuels our shared mission to ensure customer success.

GOING BEYOND

Driven by a purpose beyond profit, we leverage our success and resources to make a positive impact, creating a better world through our dedication to philanthropy and community service.

SONANCE
LIFE IS BETTER WITH MUSIC

At Sonance, we envision a world where music is woven like a thread through the fabric of everyday life. Our hidden audio solutions subtly elevate each moment, turning the ordinary into magical shared experiences. Because...**LIFE IS BETTER WITH MUSIC**

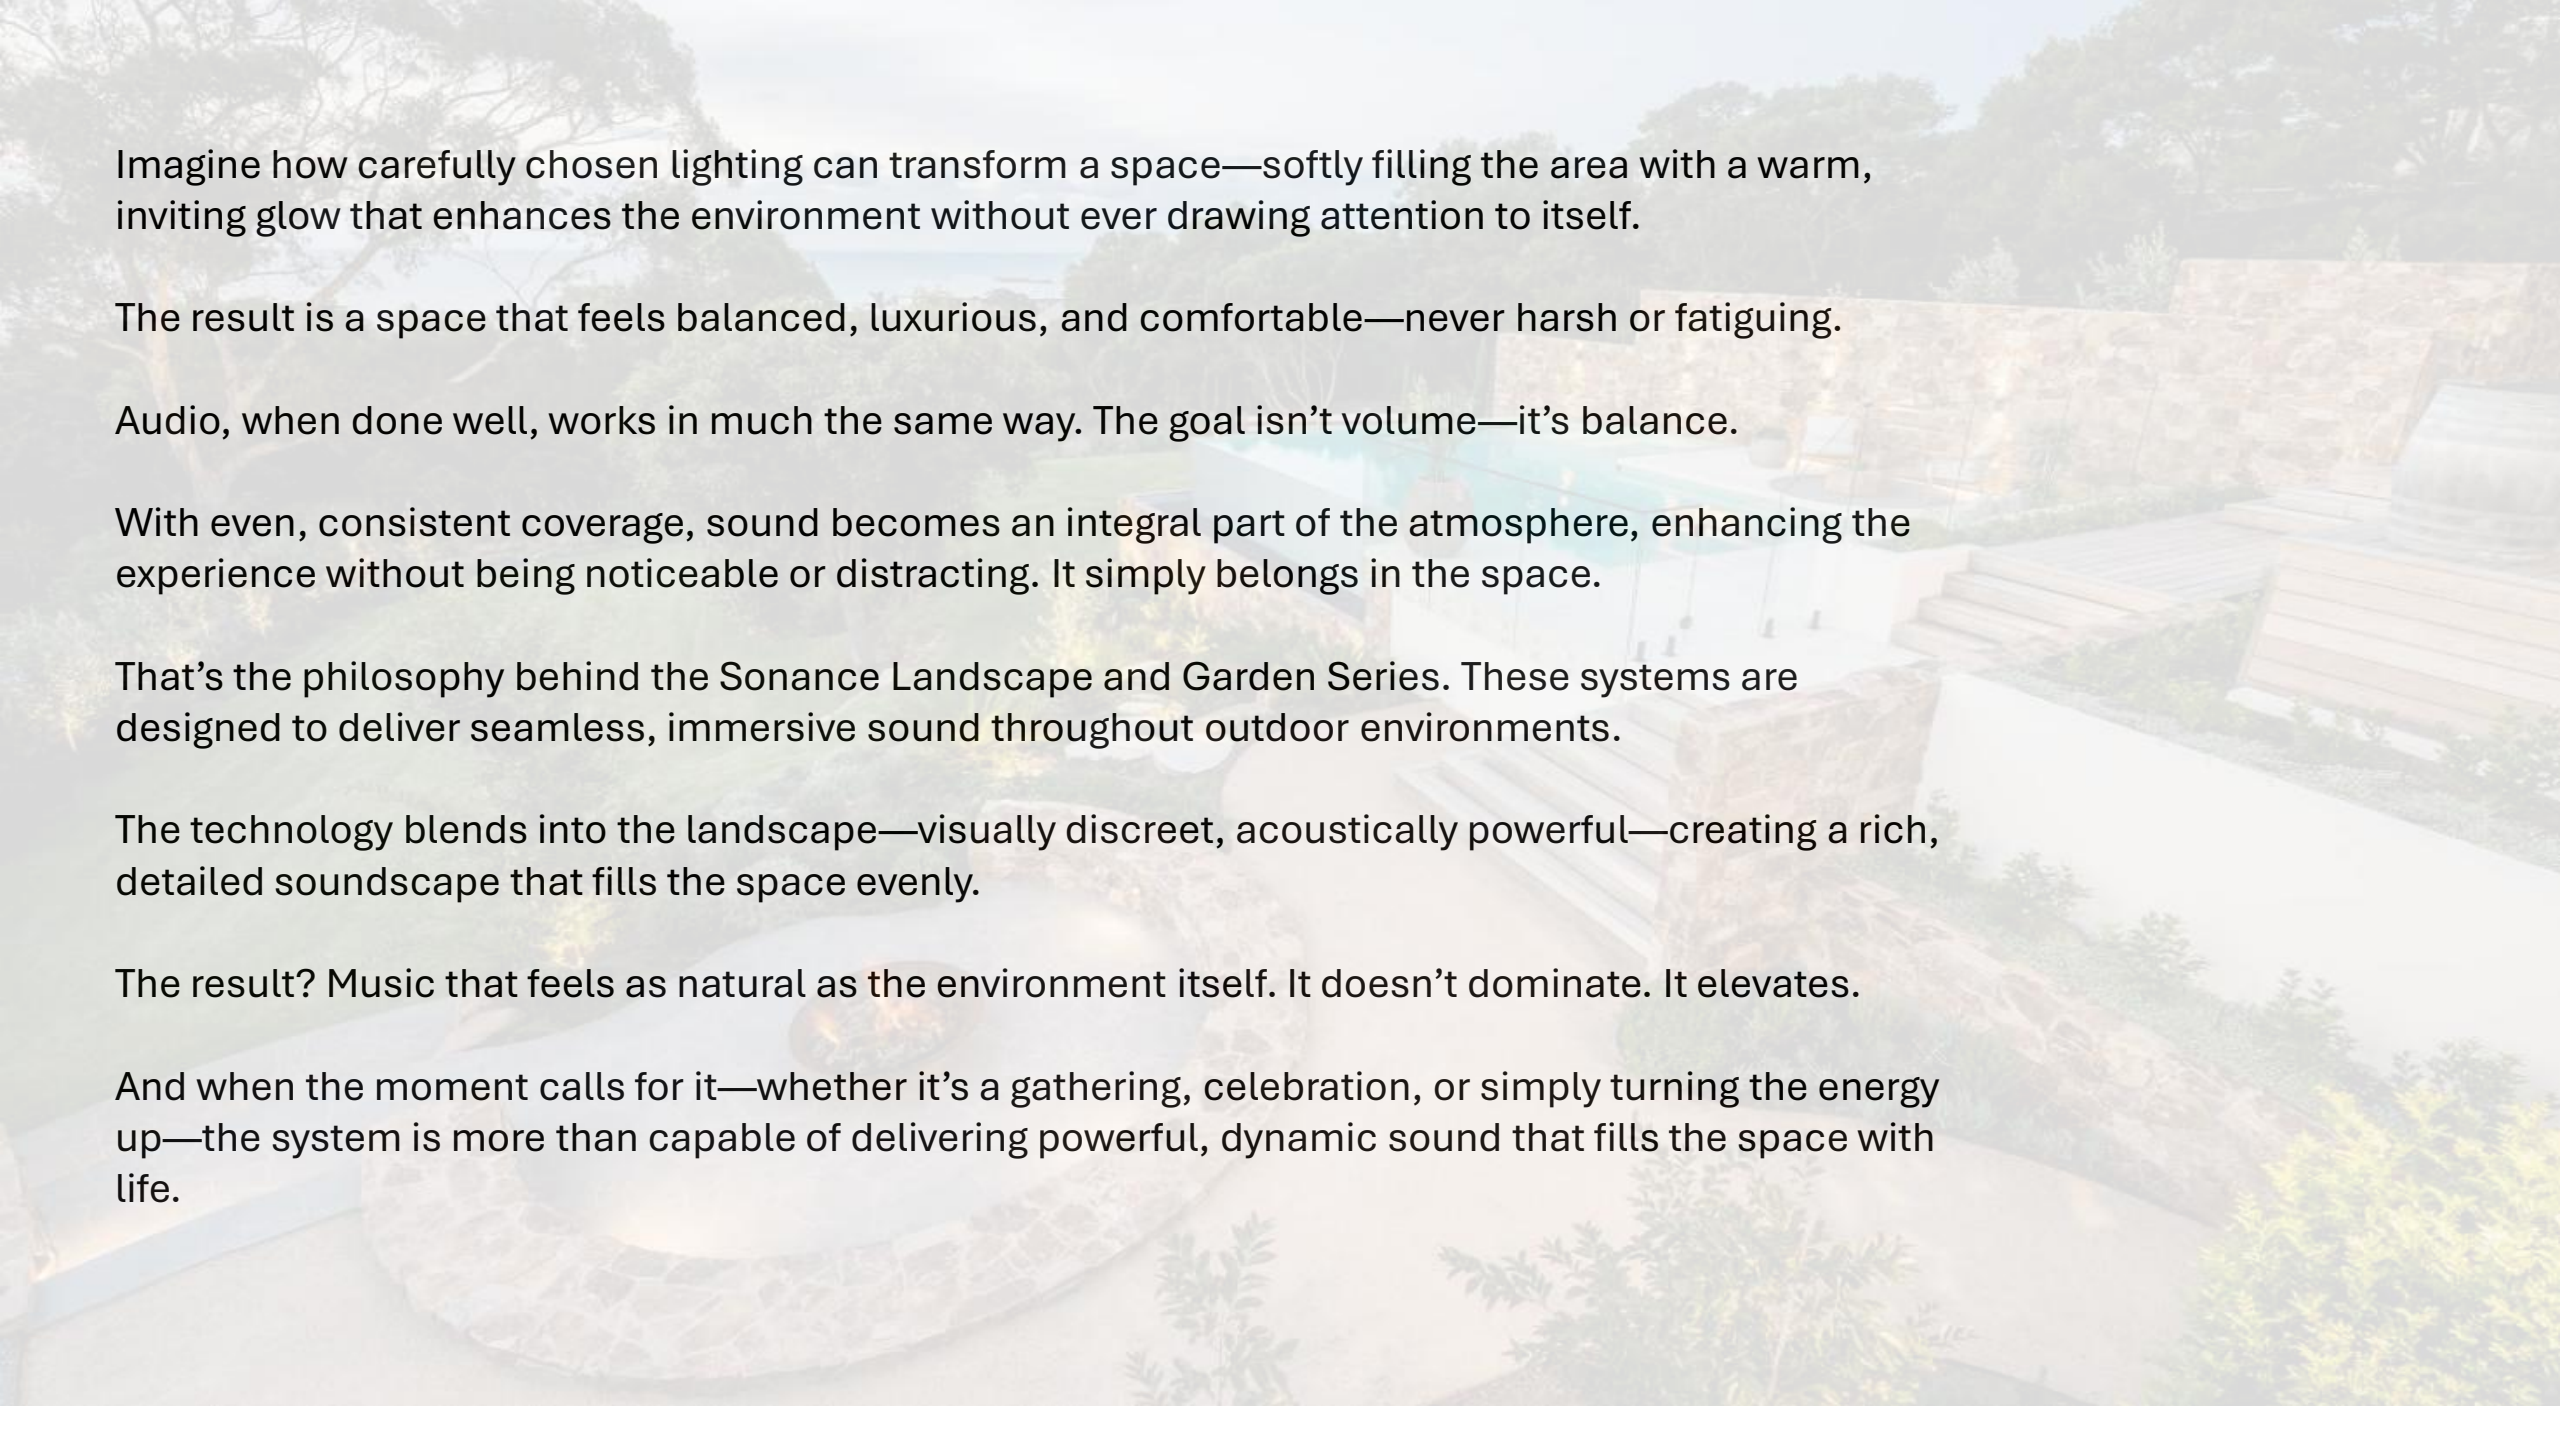

MUSIC OUTSIDE

What moves you inside should move with you outside. We've mastered the outdoor audio experience not just through performance and all-weather solutions, but also precise placement and coverage. Experience properly designed and executed music outside.

BUILT FOR THE ENVIRONMENT

- Outdoor solutions that are built to thrive in any space
 - Marine grade construction
- Natural Earth tone finishes to blend into the outdoors
- Form factors to suit soft landscape, surface mount, built-in, and freestanding applications
- IP66 and MIL Spec 810 or higher rating to ensure proper performance and protection from water, dust, sea salt, and other extreme elements

Imagine how carefully chosen lighting can transform a space—softly filling the area with a warm, inviting glow that enhances the environment without ever drawing attention to itself.

The result is a space that feels balanced, luxurious, and comfortable—never harsh or fatiguing.

Audio, when done well, works in much the same way. The goal isn't volume—it's balance.

With even, consistent coverage, sound becomes an integral part of the atmosphere, enhancing the experience without being noticeable or distracting. It simply belongs in the space.

That's the philosophy behind the Sonance Landscape and Garden Series. These systems are designed to deliver seamless, immersive sound throughout outdoor environments.

The technology blends into the landscape—visually discreet, acoustically powerful—creating a rich, detailed soundscape that fills the space evenly.

The result? Music that feels as natural as the environment itself. It doesn't dominate. It elevates.

And when the moment calls for it—whether it's a gathering, celebration, or simply turning the energy up—the system is more than capable of delivering powerful, dynamic sound that fills the space with life.

Traditional Audio Solutions

Traditional outdoor audio often relies on mounting speakers on the back of the home, projecting sound outward into the yard. While this approach can work in some situations, it frequently leads to uneven coverage—creating “hot spots” where the sound is too loud, and “cold spots” where it’s unintelligible and not as audible.

The result is an inconsistent listening experience that often turns into a back-and-forth of “turn it up” and “turn it down.” It can also mean unintended spillover into neighbouring properties.

Comfortable Audio Solutions

The Sonance Landscape and Garden Series takes a completely different approach.

By using multiple satellite speakers and buried subwoofers strategically placed throughout the outdoor space, the system delivers smooth, even coverage at a consistent volume—everywhere.

This means no more hot spots or dead zones, and no more volume battles. The sound envelops the space in a balanced, immersive way that enhances the atmosphere without overwhelming it.

And when the occasion calls for a more energetic vibe, the system is ready—delivering powerful, high-performance audio that can truly bring the party to life, all while maintaining clarity and control.

Best of all, because the sound stays focused within your space, it is less likely to interfere your neighbours.

SONANCE

Sonance Landscape Series

**Sonance Landscape Series - SLS ; Mix and match models as required for the site.
Run at 70 / 100 V or 8 Ohm.**

The New SLS family includes two satellite speaker models, two in-ground subwoofers, and one hardscape subwoofer.
This new range offers:

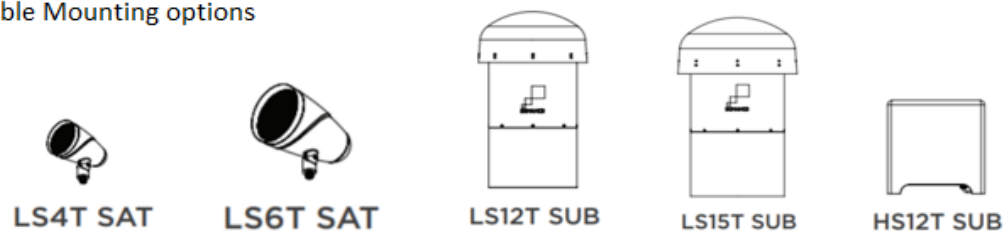

Enhanced Performance thanks to the Sonance Wide bandwidth Laminated Core Transformer and newly engineered long throw drivers

A design which blends into the landscape environment

Fully scalable, Totally expandable - run at 70v / 100v or low impedance 8 Ohm

Quality built for the elements

Flexible Mounting options

SONANCE

Sonance Garden Series

Sonance Garden Series features a system of 8 satellite speakers and 1 in-ground subwoofer, designed for easy installation and delivering even, balanced audio coverage.

This expandable system allows for up to 16 speakers and 2 subwoofers powered by a single amplifier.
